will qualified to forport him under the many difoppenitments in bafnels which he afterwards experienced. His chemical fluidies led him to the discovery of many things both of a public and private advantage.

Region region-2; provider order 2.

The constructive else of injuries end in chemistry led many to various methods of obtaining it, and Dr Roeback attempted to repense in its rich manner as tove done the prices, for which people be fullstituted burden wefeels in the room of glafs; and he had the good for- time to effect his benevolent design. He established manufacturer of this useful articles on Preferences in Scot- land, in the year 1729, which was oppofed by Dr Ward, but without licceedly, as Reachute's discovery did not come with Dr Ward's patents. By consentement and fercey Dr Roebuck and his partner preferred the advantages of their industry and especially are number of years, fungying the public will fidigraphic and at a much cheaper rate than had been formerly done.

For them is excellent to give me the medical profefi- fion altogether, and he relied in Boehland during the greater part of the year. He made home differences in the funding of incitons, greatly facilitating that procesby using the coil infused of charcoal. He and his partner therefore projected a very extensive manufacture of iron, for which they flow powered a fullestate sup- tal, an their financial bad much confidence in their inte- grity and abilities. Dr Roebuck a length made choice of a tip on the basis of the river Gavasars in the onthe advantageous fixation for the establishment of their iron manufacturing, abundance of iron-flows, lime-flow, and coal, being found in its immediate vicinity. The preparations for this rehabilitation were finished in the end of the year 1759, and the frift furnace was blown on the lift of January 1790, after which a second was in a short time needed.

Thefo works turned the attention of Dr Roebuck to the flate of coal in the neighborhood of that places, and to the ones of governing the extraordinary happles of it which the rice-works might require in future. He therefore became loffer of the active road and fall works at Bernodlovands, the property of the duke of Hamilton, in which the tank, in the course of a few years, and only his own, and a considerable part of his wife, fortune, but the regular profits of his more. OEefil works: and what allfilled him know every thing life, the great friend of money which he happened from his relations and friends, without his project of ever be ing able to repen them. This anions adventure out of for over the filtering projects of an independent for- time which his family once had; and he drew from his collary only a moderate annual report, owing to the infolgence of his creditors. When he died, his window was left without any provision for her immediate or fu- ture support, and without the finalell advantage from the extraordinary exercises and merrierious indulry of her hurland.

A life to devoted to buffets left little time for pub- locations of any kind, yet in the few he felt behind him fieldering flew what might have been expelled from his pen, had the most of his time been spent in fluy. All his writing that have been publishing, except two political symphics, are, a comparison of the heat of London and Edinburgh, experiments on ignited bodies, and observations on the ripening and filling of corn.

ROEMER, OLAs, a celebrated Danish mathematician and an afternoon, was born at Arhinton in Jutheni, in the year 1643, and was first to the recently of Copenhagen at the age of 18. By his affidano applica- tion to the flyd of almony and mathematics, be become one element in those cleans, that Picard was also- nulhed and delighted with him, when making obvar- loss in the north, by the order of Lees XIV. He prevailed to to accompany Picard to France, and being pretended to the king, he was chofen the dual- phlints times in the study of mathematics. He was alt-wards united with Picard and Coffin in making altroons- mial observations, and became a member of the Académy of Sciences in 169.

His discoveries acquired him great reputation during his ten years offence at Paris, and he did not forget to affect, that Picard and Caffini took the merit of ma-ny things which belonged exclusively to himself. Roemen was the first period who discovered the velocity with which light moves, by norms of the eclipse of Jupiter's fatalities, determining it to be about 7 or 8 minutes in coming from the foot to the earth. This opinion was opposed by many, but it was afterwards demonstrated a mod ingeous manner by Dr Bradley.

While Roemer was engaged in preparing to prohibit the retiful of his directions, he was taken of by death in the 10th of September 1710, when about 66 years of age. Horrebov, his diicple, made up this loft, by publiking in ao, in 1735, when profiled of almony at Copelandy, various proportions of Rome, with his method of observing, under the title of _Dufe Afrrona_- mine. He had also printed various almornom obliver- stations and pieces in several volumes of the Mamaus of the Royal Academy of Sciences at Paris, of the in- filtitution of 1666, particularly vols. If and 10th of that collection.
