In general the discoveries which have been effected in this quarter of the globe have resulted from attempts made to discover a novel-west passage to India through the Arctic Saxon. The existence of such a commonism is a subject which from time to time has occupied the attention of the British government for the last three centuries; and al though much valuable information has been obtained by means of these vagues, the man object remains as yet uncuncillably arrived, any important benefits to commence would be derived from it. "The first discovery of Greenland, however was the result of accident. Also the missile conflict are generally large and becu- til structures, equally unanneard and useful.

_GREENNAND, on GeoensA.ANO, in immense island king the next–went of North America, and for the now art comprehended within the arctic circle. Formerly it was response to form part of the continent of America, and the ecovies of recent registration may proved its entire sea putation from that country by the Arctic Ocean. Indeed, to very days of north-west passage from the Atlantic to te Pacific Ocean presupposed that such was the case from Cape Townell, in most southern extremity, which him the mean of nine different activities in In late. For 780', it stretches on the one side in a north-north-eastern different to Smith's Sound, at the top of Buffalo Bay, and 7774 49. On the other side of Greenland the figure of to coast is exceedingly irregular. For about ten degrees may be said generally to run in a north-north-south-western section, describing during the first five degrees a consi- rable anomaly, indicating numerous lines of the sex from latitude 700 to that of 750 the direction of the east more directly northerly, and from the latter parallel to receks nearly duo northward Ephraberger and the litude of 80". This side of Greenland has been demoni- red East or Old Grounds, and the other side is distinct subject by the course of West Greenland. The average death may be about 500 miles. Such are the limits usually slipper to this country. I does not appear to territory however, at Knit's Sound. From this point it proceeds such an far as the entrance to Lancaster Sound and here Stinks, and there is itereits in a weekly discretion by several hundred miles. Captain Parry, the discovery died in the track of Country's Davon. To the we were tire situated numerous islands, while the same navigator titled North Georgia Islands. The principal of these be Cervallis, Melville Bathura, and Bandy Land, and foundaries of this last being unknown. To the west of affair Bay and David's States, there is the large tract of country, probably separated into various islands by narrow rules. Although these would appear to be cleanited my Greenland, they should be included in every descrip- tion of that region.

In general the discoveries which have been effected in this quarter of the globe have resulted from attempts made to discover a novel-west passage to India through the Arctic Saxon. The existence of such a commonism is a subject which from time to time has occupied the attention of the British government for the last three centuries; and al though much valuable information has been obtained by means of these vagues, the man object remains as yet uncuncillably arrive. They are then allowed to come to go out uncompilation to commerce would be derived from it. "The first discovery of Greenland, however was the result of accident. Also the missile conflict are contrary, one of the memente Scandinvian marraders who infect the seat at that period was driven by a storm upon the cease of Iceland. The Norwegians were not long in establish- ing colony on this island, which increases so rapidly that in little more than a century it was itself able to send out colonise to other parts. In the year 982, Eric, a Norwegian chart set sail from Iceland in most of adventures, and inter- ing to the south-west after a quick now discovered land. Two to three years were spent by exploring the country: and Eric being studied with the freshest and texture of the shores is contrasted with the vegetation of Iceland, and distance to converge origination to the place, gave it the means of Greenland. On lineum, he gave me eng- gered description of the newly-discovered land, in con- sequence of what a first of twenty-see sail was unpiped and sent out, laten with persons of both sexes, cattle, and other necessities for forming a settlement. Only about the ball of the free vessels reached their destination, but other adventurers setting out, not only from Iceland, but from Norway, the Oktarsy and over islands, in a few years a respectable colony was formed, and a regular trade- blished. It seems highly probable that the original colo- ny of Greenland began about the southern primary year Cape Browell, and gradually extended itself along the coast in a north-worthy direction. Beyond this first settlement another convertedler to the west. The former was called _Clear Dyglic_, or the eastern settlement, and the latter _Faste Dyglic_, or the western settlement, Orishinity having been introduced about the beginning of the fourth century, numerous churches and concerns were built, and the country was divided into regular markets, to which monks and other spiritual instructors were attach- ed. The colonies, although confined to lead a life of se- crepression and handbylied continued to increase, and to extend to the north. The real which which early Scam- diarian passed their settlements to the northernmost parts of Greenland is strikingly selected by a curious mo- ment, which was discovered in 1834. It contains of a some cases with Rumi characters, which was found each- ing erect in the ground on the island of Kingkitorsoak, un- der the parallel of 730^.
