Of Saxa and Patrifaitions.

Region region-4; provider order 4.

THOUGH the Saxa, and forthially commonly called _Patrifaites_, cannot, in fierisefs, be ranked in a mineral lyffen, for the reasons formerly given yet as thefe bodies, especially the latter, occupy its con-fabricable a place in most natural conditions, and the former multi excellently be taken notice of by the miners in the oberations they make in information geo-graphy. It appeared proper to faighon them in fact an order as might an/wer the purpfor for which they are regarded by miners and mineraloguils.

Region region-5; provider order 5.

Orler I. Saxa. _Potre._

Region region-6; provider order 6.

The may be divided two kinds.

Region region-7; provider order 7.

1. Compound fans, are those whole particles, con-fifing of different fuhlances, are to readily fitted and joined together, that no empty faces, or even comes, can be perceived between them which forms to soll-cate, this fome, if not all of their fuhlances have been left at the infant of their union.

Region region-8; provider order 8.

2. Compinated flavors, are those whose particles have been united by fone cementitious fuhlance, which, however, is federn precenties, and which of ten has not been sufficient to fill every place between the particles: in this cafe the particles fem to have been hard, worn off, and in loose, fingle, undigured pieces, before they were united.

Region region-9; provider order 9.

I. Compound faxa.

Region region-10; provider order 10.

A. Opklits. Seely linefone with kernels or bind of temperature than in it.

Region region-11; provider order 11.

1. _Kelmond marble._ It is white and green.<y_0.5359><class_List-item>

<x_0.167><y_0.5352>2. _Separation onions_, is white, with round pieces of black flashes in it. This means not be confounded with the _forpentino verde onion._

Region region-12; provider order 12.

3. The _literalifly marble._ White, with qua- dranpillar pieces of a black flashes.

Region region-13; provider order 13.

4. The _nurave peazence di Grenava._ Dark grey morphs, with white ones. This kind receives its fine polish and appearance from the repertoire alone.

Region region-14; provider order 14.

B. Kolliffe are gulfilition. Granitello.

Region region-15; provider order 15.

1. Of distinct particles. In fone of thefe the quartofo particlesplasmanants and mothers the mascotas; in the half cate it is com- monly flatty, and easy to folklt.

Region region-16; provider order 16.

2. Of particles which are wrap up in one anao-ther,

Region region-17; provider order 17.

a. Whitih grey.

Region region-18; provider order 18.

b. Greenith.

Region region-19; provider order 19.

c. Reddith.

Region region-20; provider order 20.

C. Norrkis. _Marleyton_ of the **Swedex.** _Suxum Alpeste-_ comptium mica, quartiers, at genuine.

Region region-21; provider order 21.

1. With distinct garners or filnit.

Region region-22; provider order 22.

a. Light grey.

Region region-23; provider order 23.

b. Dark grey.

Region region-24; provider order 24.

c. Dark grey with prinatical, radiated, or famous cookie or thirl.

Region region-25; provider order 25.

2. With kernels of garnet-flone.

Region region-26; provider order 26.

e. Of pink red garnet flone.

Region region-27; provider order 27.

The first of this kind, whole fatty frata makes it commonly easy to be fplit, is employed for millixtures, which they without difficulty by accomplished, if find in lift ground with them; because the fand wearing away the microneast particles on the furties, and leaving the genera prominent, renders the flone fitter for grinding the corn.

Region region-28; provider order 28.

D. The witchers, Goo. _Suxum compolham mi-_ cin, quartiers, of Jofim argilla martiab in non- nulli faculties.

Region region-29; provider order 29.

1. Of course particles

Region region-30; provider order 30.

a. White.

Region region-31; provider order 31.

b. Light grey.

Region region-32; provider order 32.

2. Of fine particles.

Region region-33; provider order 33.

a. Liver-brown colour.

Region region-34; provider order 34.

b. Bakklik grey.

Region region-35; provider order 35.

c. Light gray.

Region region-36; provider order 36.

d. Black. The table-flate, or that kind ufed for large males and for school flates.

Region region-37; provider order 37.

3. Of very minute and clofoly combined par- ticles. The Tyler does. This is of an eye, olive colors, and form to be the fixed mix (pit, ture of the frilt species of this genus. The col. 1.) be full this fort come from the Levens, and are pretty denz. The whitenkin kinds, when they fplit calily and in thin plates, are very fit to cover house food, though molt of them are without those properties.

Region region-38; provider order 38.

F. Porphyrer * Porphyries. Teildaum perifolia. _Suxum compolham jellyfish et jiflorida, interlam_ mica de lylko (n). See the article Pax Paxxx.

Region region-39; provider order 39.

a. He colour is green, with light-green felfiptar. _Separation zone, action._ It is told to have been brought from Egypt to Rome, from which latter place the ipcemens of it now come.

Region region-40; provider order 40.

b. Deep red, with white felfipat.

Region region-41; provider order 41.

c. Black, with white and red felfipat.

Region region-42; provider order 42.

d. Reddih brown, with light red and white felfipat.

Region region-43; provider order 43.

Dark grey, with white grains of felfipat also. The dark red porphyry has been molt employed for ornamentes in building yet it is not the only one known by the name

Region region-44; provider order 44.

(a) Great part of the hill of Bineves in Locahaber is composed of a kind of porphyry. It is remarkably fine, beautiful, and of an elegant reddish color; ½ in which (days Mr Williams), the pale role, the bluh, and the yellowish white colours, are finely blended and faded, through the body of the flone; which is of a jelly- like texture, and is undoubtedly one of the finet and mole elegant those in the world. On this hill alo is found a kind of porphyry of a growth colony with a living of brownish red. It is smooth, compact, and heavy; of a clote uniform texture, but has no brightened when broken. It has angular fpecks in it of a white quartzy fuhlance[?]
