Region region-2; provider order 2.

Export. Chár-—Bifdth format entire mountains, in the neighbourhood of which it is found in rounded pieces, or in large globular mafles; internally to daily fame- timing glimmering from an mixture of hombileends; fracc ture uneven, formesites for filpintery or conchadial] fragments not very therapeued… It is small frequently in difficult connections, which are informed or common, more on left regular, sometimes also in globular difficult coercations.

Region region-3; provider order 3.

Colon greyyth or bluilli black, fometines brownith on the surface opaque fembled luttes, and very difficulty fragilible, fresh light alh, gray; gives a singing found under the hammer. Spec: grax 2.86 to §2.

Region region-4; provider order 4.

_Chem. Char-Meits very early before the blow- pipe into an opaque black giafs which acts on the majority.

Region region-5; provider order 5.

_Prefeal Char-—Many baflts affect the magnetic needle, revealing the poles when it is brought near them. This is distinct to the great proportion of iron which enters into their compulsion.

Region region-6; provider order 6.

Location. _JSC-—halbit is not uncommon in every part of the globe, and in many places it is very strong dant. It is found in regular columns in several of the Hendees on the west coast of Scotland, as in County Tigge, his Schalen like, but particularly beautiful in Staf- Ry. Pretty regular columns are displayed also a Dunley and on the Gulfwide field of Arkharkaceae near Edina burgh 3, but the Giant's caufevay and the rocks about Firland on the north coast of Ireland, exhibit the fuet and south extensive ranges of columnar bafla in the world.

Region region-7; provider order 7.

Radki, besides being in the columnar form, is often thin diped in beds and veins; both of which are very common to different places in Scotland, particular the the written coal, and in the section thanks. See _Wild- liamet's Mineral Kingdom._

Region region-8; provider order 8.

No bijefek, in geological population, has produced more controversial difficulties than the origin of bafalt; one narry affecting that is in the effect of fallen, while another contends that can have been deposited from an aqueous solution. Our limits preclude us even from Bruty literary arts arguments which have been

applied by naturalnils in fourport of the theories which different parties have embraceed. For an account of some of them, for Colorser, Index, and for the constituent parts of bafas, and home other has connected with its manera history. fee Baux.tv.
